

The Halo™ Disinfectant Formula is Unique Yet Brilliantly Simple.

Unique Patented Technology - Complex, Synergistic Chemistry

A Multi-Faceted Killing Mechanism

HOW SANOSIL WORKS

Halo Disinfectants are patented, ready-to-use, 5% hydrogen peroxide and 0.01% silver formulas - the *only* EPA registered disinfectants with this formulation. Hydrogen peroxide is the oxidizing agent; silver adds an additional broad-spectrum anti-microbial element to this unique formula. A proprietary and complex blending process stabilizes the H₂O₂ while amplifying the anti-microbial action ten-fold, delivering a formula that behaves completely different than its original ingredients. The result: a radical fluid architecture with synergistic, multi-faceted killing mechanisms that:

- 1) break down a cell's membrane,
- 2) destroy enzymes (cell's energy source), and
- 3) bind the cell's DNA to stop reproduction.
